

# Anaerobic Digestion Flares

- Wide range of flow capacities
- Mild or stainless steel construction
- High temperature ceramic liner
- Control system integration
- Fire safe valves (optional)
- Gas analysis equipment (optional)
- Connecting pipe work
- Installation & commissioning
- Full product support

## landfill systems

engineering a better environment

Landfill Systems manufacture a wide range of stand alone flares and booster packages specifically designed for Anaerobic Digestion applications. We also offer many control options including pressure control.

All of our systems use colour touch-screen control technology which can be easily integrated with existing or proposed distributed control systems (DCS).

With regard to the UK Environment Agency recommendations on landfill gas flare exhaust emissions standards, Landfill Systems offer both compliant and non-compliant flare options.

Units are available in a wide range of flow rates from 10Nm<sup>3</sup>/hr. up to 2,000Nm<sup>3</sup>/hr. Larger flows can be catered for by using multiple flares.

Training for the safe operation of each flare is provided at the time of commissioning.
