

Company Profile

landfill systems

engineering a better environment

Landfill Systems was formed in 1995 to meet the demand for electrical and mechanical engineering services created by the landfill gas renewable energy industry.

Landfill Systems primarily provides electrical and mechanical services to the waste, environmental & renewable energy industries.

Our team of experienced engineers has developed a number of technical solutions many of which are directly transferable to the AD industry.

Operating from our 1 acre industrial site in East Anglia, the Company installs and maintains plant throughout the UK.

Company Products

- AD Flares
- High Temperature Flares
- Low Calorific Gas Flares
